BRINGING HEALTHCARE TO COMMUNITY LEARNERS

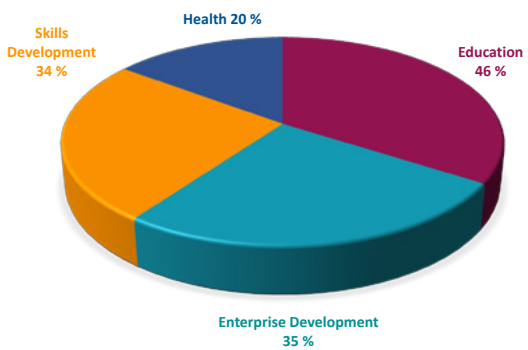

Our Mobile Health Clinic Programme brought healthcare services directly to eight schools across Maquassi Hills and Matlosana, reaching 1,244 learners. The programme offered primary healthcare, dental, and optometry screenings, along with health education sessions on healthy living and disease prevention.

Through the programme, 20 learners were referred to hospital for specialised care, and 60 learners received prescription glasses to help with vision problems, support that should help with concentration, classroom participation, and school performance. By catching health issues early and connecting learners to further treatment where needed, we're working to make healthcare more accessible for our communities.

We remain committed to healthcare initiatives that help build healthier, stronger communities, now and in the future.

HELPING LOCAL BUSINESSES GROW

We recently supported local SMME, OG Lifestyle, through the donation of essential equipment, as part of our ongoing commitment to strengthening local enterprises and communities. The equipment included a double-door display fridge, display meat freezer, ice-making machine, two 12-litre deep fryers and an additional ice machine.

This initiative forms part of our Social Performance programme, which focuses on enhancing livelihoods and driving sustainable socio-economic development. The equipment was carefully selected to meet the business's operational needs, addressing a key challenge faced by many small businesses — access to the right tools.

With this support, OG Lifestyle is better positioned to improve productivity, enhance service quality, and grow its market presence.
